Hints if you're struggling in your science class:

- 1) Ask more questions during class.
- 2) Take good notes write down everything your teacher writes on the board.
- 3) Do **all** your homework, labs and assignments.
- 4) Form a Study Group with other students in your science course they don't have to be in your same period.
- 5) Study at least 30-40 minutes a day **not** just before the test.
- 6) See your teacher before or after school for extra help and/or other science teachers outside of class for extra help.
- 7) Take advantage of online resources for your book.

^{*}If **all** the above isn't enough, consider hiring a science tutor to address specific weaknesses.
